Art Unit: 3652

1. Applicant's arguments with respect to claims 1-17 have been considered but are moot in view of the new ground(s) of rejection.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. Claims 1-15 are rejected under 35 USC 103(a) as being unpatentable over Kinpara et al in view of Mastroianni, Mages et al, WO 00/33376, Bonora et al #6,138,721 and Semi E57-0299. Kinpara et al disclose a substantially similar system in Fig. 3. Kinpara et al lacks a sensor, shelf mounting and kinematic connections. Mastroianni discloses the use of a pod sensor. Mages et al disclose shelf mounting. WO 00/33376, Bonora et al '721 and Simi E57-0299 disclose the use of kinematic connections. It would have been obvious to a mechanic with ordinary skill in the art at the time the invention was made to provide these features to the primary reference. The motivation to provide kinematic connections is for easy assembly. Shelf mounting is the known use of equivalents. A sensor provides for positive connection. The recited

dimensions for depth, width and height provide no patentable moment (In re Rose, 105 USPQ 237; In re Revin 156 USPQ 679; In re Reese 129 USPQ 402).

5. Claims 16 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Williams et al, <sup>in view of Mages et al, Williams, et al</sup> disclose a substantially similar system, note anchor #124. William et al lack an upper interface. An upper interface is disclosed by Mages et al.

7. Any inquiry concerning this communication or earlier communications form the examiner should be directed to Examiner Bratlie whose telephone number is (703) 308-2669. The examiner can normally be reached on Monday through Thursday from 6:30 to 5:00. Friday is the examiner's day off.
